DETAILED ACTION

Response to Argument

The examiner acknowledges the amendment filed 3/13/06 with the following effect;

The applicant has canceled claims 1 – 11 and has added the new set of claims 12 – 15, upon further search the examiner makes new ground of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2829

1. Claims 12 – 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Yoshida (US 6,215,324)

As to claim 12, Yoshida (fig 3) disclose a process of testing an integrated circuit comprising:

A. applying stimulus test signals (IN, from 61, 62) to input pads of the integrated circuit (21);

B. conveying the applied stimulus test signals (IN, from 61, 62) to core circuits (inside the dut 21) in the integrated circuit;

C. producing core test response output signals (OUT) from core circuits (21) in response to the stimulus test signals (IN);

D. applying expected response test signals (64) to output pads of the integrated circuit; and

E. comparing the core test response output signals to the expected response test signals on the integrated circuit to produce a pass/fail signal (column 3 lines 29 – 49).

As to claim 13, Yoshida (fig 3) disclose the process of claim 12 including switching (two switches in figure 3) output buffer circuitry from output circuitry to input circuitry to accept the applied expected response test signals.

As to claim 14, Yoshida (fig 5) disclose the process of claim 12 stimulus test signals to input pads of plural IC (21 – 24) in parallel.

As to claim 15, Yoshida (fig 5) including applying expected response (expected value) test signals to output pads. of plural integrated circuits (21 – 24) in parallel.

Conclusion

2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
